EXHIBIT A-1.6 – CHANGES	2
--------------------------------------	----------

EXHIBIT A-1.6 – CHANGES

A-1.6.a – Provide a map and description of any known potential modifications or variations in the proposed site plan that are being considered at the time of filing and that will be finalized prior to construction.

The Applicant anticipates that the battery equipment currently proposed has the potential to be modified or vary from the proposed site plan and will be finalized before construction.

A-1.6.b – Minor changes are not required to be submitted. A minor change is any change within the project footprint that still allows the facilities to meet all of the criteria outlined in PA 233, does not create new or additional impacts and does not require new permits; however, a minor change does not include any of the following:

- 1. A change that would expand the footprint or perimeter of the site plan.**
- 2. A change in planned technologies (such as the addition of an energy storage facility to an existing site or other technological changes increasing noise or impacting permit requirements).**
- 3. Reduced setback distances from any part of the planned facilities to occupied structures, non-participating property lines, or rights-of-way if the new setbacks violate any setback requirements in PA 233.**
- 4. Any change that affects water detention or retention or other stormwater runoff.**
- 5. An increase in the height of the tallest equipment or structures.**
- 6. Repowering.**
- 7. Any increase of noise impacts to non-participating structures above the 55 dB average hourly limit.**

The Applicant understands that any potential modifications or variations to the site plan being considered at the time of filing that will be finalized prior to construction and are not considered “minor changes” by the MPSC (any change within the Project footprint that still allows the facilities to meet all of the criteria outlined in PA 233, does not create new or additional impacts, and does not require new permits) will need to be submitted as a part of the application process.

Changes that require notification include, but are not limited to, expanding the site plan footprint or perimeter, altering planned technologies, reducing setback distances that violate PA 233 requirements, affecting stormwater management, increasing the height of the tallest structures, repowering, or increasing noise impacts to non-participating structures above the 55 dB hourly limit.
